EXPERIENCE

Software Engineer — Example Tools | 2023–2025

- Built reliable TypeScript and Node.js REST APIs for a task-management application.
- Optimized PostgreSQL queries, reducing measured p95 response time from 240 ms to 160 ms.
- Wrote automated Vitest unit tests and documented API error handling with a small three-person engineering team.

EDUCATION

BSc Computer Science — Example University | 2023

SKILLS

TypeScript, Node.js, PostgreSQL, SQL, Git, Vitest

ADDITIONAL SYNTHETIC EXPERIENCE

- Qualification item 01: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 02: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 03: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 04: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 05: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 06: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 07: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 08: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 09: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 10: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 11: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 12: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 13: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 14: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 15: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
- Qualification item 16: Maintained TypeScript API documentation and PostgreSQL query tests with the engineering team; preserved measured response-time evidence and recorded repeatable verification steps.
